

CHARGE READY HOME + TESLA CHARGER DONATION

CASE STUDY: VIVIAN ALECIO

How a Tesla-donated Level 2 charger and SCE's Charge Ready Home program helped a Lancaster family access reliable home charging

Vivian Alecio

Homeowner and EV driver

- **Single-family residence**
- **Lancaster, California**
- **Tesla Wall Connector donation + Charge Ready Home panel-upgrade support**
- **Level 2 home charging**

TWO PARTNERS, ONE PATH TO HOME CHARGING ACCESS

Vivian Alecio is a homeowner and mother in Lancaster, California. Her family regularly makes a roughly 130-mile round trip to Los Angeles for medical appointments, so dependable transportation is essential.

After purchasing an electric vehicle, Vivian wanted the convenience and confidence of charging safely at home. But two common barriers stood in the way: the family's older electrical panel needed an upgrade, and Level 2 charging equipment added another upfront cost. Charging from a standard household outlet was too slow and unreliable for the family's travel needs.

"When we found the program, it almost felt too good to be true. We could not afford the panel upgrade on our own. The program made reliable home charging possible for our family."

Vivian Alecio | Lancaster homeowner

CHARGE READY HOME AND TESLA HELPED CLOSE THE COST GAP

SCE's Charge Ready Home program helped offset qualifying electrical panel-upgrade costs, while Tesla's donation provided a free Level 2 home charger to an eligible program participant. Together, the program and donation addressed both sides of the home-charging challenge: making the home ready for Level 2 charging and making the charger itself available.

Vivian worked with a licensed electrician she trusted to complete the upgrade, including permits, inspections, and before-and-after documentation. Once the upgraded electrical capacity was in place, the donated Tesla Wall Connector gave the family a faster, more dependable way to charge at home.

RELIABLE LEVEL 2 CHARGING BRINGS CONFIDENCE, SAVINGS, AND ACCESS

The family's Level 2 charger is faster and more dependable than their previous setup. They usually charge at night, when Lancaster temperatures are cooler, and the vehicle is ready for regular travel, including trips to Los Angeles for medical appointments.

Vivian reports meaningful fuel savings, with money that previously went to gasoline now helping cover the vehicle payment. The panel upgrade also modernized the home's electrical capacity and helped prepare the property for future electric needs. Most importantly, the combination of Charge Ready Home support and Tesla's donated charger helped turn EV ownership into something practical and accessible for her family.

KEY TAKEAWAYS

- Tesla donated free Level 2 chargers to help eligible Charge Ready Home participants access faster, more reliable home charging.
- Charge Ready Home helped make the required electrical work more affordable by supporting qualifying panel-upgrade costs.
- The combined support helped address two barriers at once: the cost of the charger and the cost of preparing the home to use it.
- Reliable Level 2 charging can help families manage frequent travel, reduce gasoline spending, and build confidence in EV ownership.
- Eligible participants should apply while donated Tesla Wall Connector units remain available.

"If you qualify and you need it, do it. It's a huge blessing."
